SUMMARY

Sophomore Electrical Engineering student at Arizona State University with engineering/manufacturing internship experience and current research experience in solar materials. Interested in energy, power systems, hardware, and applied engineering, with additional hands-on experience through engineering projects and technical teams.

EDUCATION

B.S.E., Electrical Engineering

Arizona State University, Tempe, AZ | Barrett, The Honors College

Graduating May 2029

3.76 GPA

TECHNICAL SKILLS

Design and Modeling: Blender, Fusion360, Vectric vCarve

Fabrication, Technical: Soldering, electrical equipment installation, equipment troubleshooting, CNC systems, G-code

Fabrication & Laboratory: 3D printing, MIG welding (basic), perovskite solution preparation, spin coating, thermal annealing

ENGINEERING EXPERIENCE

Constructive Realities, Inc., Escondido, CA: Machine and Process Intern

May–Sep 2025; Apr–Aug 2026

- Installed and refurbished a Motionmaster 3-axis industrial CNC machine, supporting mechanical setup, system integration, and commissioning.
- Collaborated with engineering staff and an electrician to design equipment power drops, install conduit and wiring, and bring manufacturing equipment online.
- Built a proof-of-concept simulation of a 3-axis CNC machine using open-source modeling tools to interpret and visualize processed G-code.
- Designed and operated a multi-rotor drone airframe manufacturing process, including production workflow, inspection, and quality-control activities.

Undergraduate Research—Perovskite Photovoltaics

Barrett Fellows Program | Arizona State University

Aug 2026 - Present

- Investigate perovskite materials for potential use in transparent and semitransparent photovoltaic cells, with a focus on materials preparation and device fabrication.
- Formulate perovskite solutions, spin coat glass substrates, and anneal resulting films for photovoltaic research.

ENGINEERING PROJECTS & ACTIVITIES

EPICS—Zelaki Ethiopia Team | EPICS Engineering Team Member

Aug 2026 - Present

- Contribute to development of small-scale plastic-recycling systems that convert waste into useful products for communities in Ethiopia.
- Operate, troubleshoot, and repair plastic-recycling equipment, including small-scale shredding systems, to support prototype development and testing.
- Support development of recycled-plastic manufacturing methods, including injection molding and alternative molding techniques for producing useful end products.

ASU Solar Devils | Solar Vehicle Team Member

Jan 2026 – April 2026

- Contributed to a student team designing and building a high-efficiency solar-powered vehicle for competition.
- Soldered photovoltaic cells in series to assemble solar modules for the vehicle's electrical power system.
- Encapsulated and sealed assembled solar cells with epoxy to improve durability and weather resistance.

ASU Satellite Club | Member

Aug 2026 - Present

- Participated in early mission-planning activities and submitted a proposal for a potential technical focus area for the club's satellite project.

ADDITIONAL EXPERIENCE

Health West Physical Therapy, San Marcos, CA: Intern

Jan 2025 – May 2025

- Assisted with patient documentation, note-taking, and scheduling while observing clinical workflows.
